

HANDOUT

Role play scenarios

Scenario 1: Anna brought her 4-year-old daughter Susan to the drug shop with a complaint of cough for the last 7-8 days. Since yesterday, Anna noticed that Susan is having difficulty breathing. She has also not been eating properly. On assessment, the drug shop vendor identified that Susan has chest in-drawing.

Scenario 2: Ruth brought her 2-year-old grandson Alex to the local drug shop with a complaint of cough and runny nose for the last 4-5 days. The drug shop vendor checks Alex's breathing, which was 46 breaths in one minute. There was no chest in-drawing.

Scenario 3: Sam brought his 7-month-old son Bill to the drug shop. Bill has had a cough for eight days, and since yesterday he also developed a fever. The drug shop vendor counts Bill's breaths and checks for chest in-drawing. Bill's breath count was 60 per minute without any chest in-drawing.

Scenario 4: Sophia brought her 1-year-old daughter Martha to the drug shop, complaining that Martha has had fever and cough for 10 days. Her appetite is low, but she still eats her regular foods. The drug shop vendor checks Martha's breathing and finds that it is 36 breaths in one minute. There is no chest in-drawing.
